

MS SERIES MULTI-SHUTTER REGISTERS

MSV Vertical face blades, individually adjustable. Gang operated multi-shutter dampers.

MSH Horizontal face blades, individually adjustable. Gang operated multi-shutter dampers.

DESIGN: Grillmaster's MSV series provides single deflection air patterns by means of streamlined 5/8" deep, individually adjustable front blades on 3/4" centers. Volume adjustment is by lever operated multi-shutter dampers.

FEATURES: CORNER KEY construction ensures tightly closed mitre. Heavy, tempered blades of teardrop design. OVER LAPPING damper blades allow positive closeoff. Face blades individually wired and staked in place for added security. Register body has CORNER CLIPS to prevent spreading. Unit features complete assembly by mechanical methods, rather than conventional welding methods.

CONSTRUCTION: Constructed entirely of aluminum extrusions throughout. Stainless steel rivets are used for durability. .050" frame thickness. Anodized finish, can be painted, if desired without priming.

APPLICATION: Designed primarily for high and low sidewall application. Narrow depth allows installation in areas restricted in this dimension.
